

# EMIF Deliverable 12.7: Final report on data flows, data integration, processing and linkage

Executive summary

## Executive Summary

This final deliverable of WP12 “Data Extraction, Benchmarking, Aggregation & Linkage” provides a high-level overview and update of all the work performed in the Work Package. Furthermore, it provides guidance for future work and application of the developed tools and methods after the EMIF project.

We discuss the agile development process and application of the Jerboa Reloaded tool that enables the federation of EHR databases, highlight the Data Derivation Workflow (DDW) and the work performed on linkage. Finally, we discuss the process of mapping of the EMIF databases to the OMOP Common Data Model.

The work performed in WP12 is proven to be sustainable and will be of high value for upcoming projects, research, and commercial studies.
