

EMIF Deliverable 15.7: Final Business Plan

Executive summary

Executive Summary

This document should be read in conjunction with D15.6. D15.7 acts as an update on progress made since D15.6, across the two separate tracks, population/EHR-based, and cohort-based data tracks. As is already documented, IMI projects sustainability is notoriously challenging, and this is no different to EMIF. By the end of the project we have three scenarios unfolding: (1) a major aspect of the population data track is being made available to any bona fide researcher, as well as being integrated into a, hopefully, forthcoming IMI2 project, European Health Data and Evidence Network (EHDEN); (2) the EMIF-AD cohort track is being commuted to a continuing project to support the AD research community, and (3) the EMIF-MET cohort track is exploring other research grant applications.
