

## EMIF Deliverable 15.8: Final report on outreach activities: leveraging with related initiatives, contacts with external data sources and with key stakeholders

### Executive summary

#### Executive Summary

Deliverable D15.8 “Final report on outreach activities: leveraging with related initiatives, contacts with external data sources and with key stakeholders” details the final developments undergone in terms of external outreach, both with the relation with other projects and initiatives, and the leverage of the tools developed in EMIF, as well as the specific work undertaken to reach the AD cohort community.

In Chapter 2 this deliverable summarises and reiterates some of the early work undertaken through WP15 to identify relevant initiatives (such as IMI and Horizon 2020 projects) that EMIF should track, and how these were filtered and prioritised. Our initiatives that were close to implementation were considered of greatest relevance to EMIF: ADVANCE, EHR4CR, DPUK and OHDSI. This deliverable summarises the ways in which those project results were reused within EMIF, and vice versa.

A significant outreach has taken place within the Alzheimer’s Disease research community, and Chapter 3 reports on the progress of integrating this community of data sources into the EMIF ecosystem.

The final chapter summarises a new IMI project, to start later this year, that will scale up the EMIF Platform achievements.
