

# EMIF Deliverable 7.4: Tests of the predictive ability of the algorithms for clinical outcomes in diverse populations of obese adults and children

---

## Executive summary

### Executive Summary

Deliverable 7.4 was not completed.

Reasons for deviation: We did not have adequate time to progress our initial clinical outcome associations to predictive algorithms that could be tested in other populations. In addition, suitable datasets within EMIF for replication analyses were limited. We did not have access to adequate datasets to study outcomes in children.
